

**Neighborhood Air Toxics Modeling Project
For
Houston and Corpus Christi – Stage 1**

Quarterly Report for the Period

July 1, 2010 through September 30, 2010

Submitted to

**The Honorable Janis Graham Jack
US District Court Judge, Southern District of Texas
Corpus Christi, Texas**

Submitted by

**David Allen, Ph.D.
Principal Investigator
and
Elena McDonald-Buller, Ph.D. (Air Quality Modeling Team Lead)
Gary McGaughey, M.S. (Meteorological Modeling Team Lead)
Vincent M. Torres, M.S.E. (Ambient Monitoring Team Lead)

November 30, 2010

I. Introduction

On February 1, 2008, the Court entered an Order (D.E. 981, Order (pp.1, 7-11)) regarding unclaimed settlement funds in Lease Oil Antitrust Litigation (No.11) Docket No. MDL No.1206. The Court requested a detailed project proposal from Dr. David Allen, the Gertz Regents Professor in Chemical Engineering and the Director of the Center for Energy and Environmental Resources at The University of Texas at Austin (UT Austin), regarding the use of \$9,643,134.80 in the Settlement Fund. The proposal was for a project titled "Neighborhood Air Toxics Modeling Project for Houston and Corpus Christi" (hereinafter "Air Toxics Project"). The Air Toxics Project was proposed in two stages. In Stage 1, UT Austin will develop, apply, demonstrate and make publicly available, neighborhood-scale air quality modeling tools for toxic air pollutants in the Corpus Christi, Texas and will extend the operation of the air quality monitoring network in Corpus Christi, Texas. In Stage 2, subject to the availability of funds, UT Austin will extend the modeling to the Houston, Texas ship channel region, develop a mobile monitoring station that can be deployed in Corpus Christi and in other regions of Texas and/or further extend the operating life of the existing stationary network in the same or a modified spatial configuration. If a mobile monitoring station is deployed, it will be used to map the spatial distributions of air pollutant concentrations and to inform the public. All ambient monitoring results will be used in synergy with the neighborhood-scale models to improve the understanding of emissions and the spatial distribution of air toxics in the region.

On February 21, 2008, the US District Court for the Southern District of Texas issued an order to the Clerk of the Court to distribute funds in the amount of \$4,586,014.92, plus accrued interest, to UT Austin for the purposes of implementing Stage 1 of the Air Toxics Project as described in the detailed proposal submitted to the Court by UT Austin on February 15, 2008 (D.E. 998).

Under the Order to Distribute Funds in MDL No. 1206, on March 3, 2008, at the direction of the Settlement Administrator, \$4,602,598.66 was disbursed to UT Austin for Stage 1 of the Project. This amount includes the interest accrued prior to distribution from the MDL No. 1206 Settlement Fund. Stage 2 funding has not been awarded by the US District Court.

This Stage 1 quarterly report has been prepared pursuant to the requirements of the Air Toxics Project and is being submitted to the US District Court.

II. Air Toxics Project – Stage 1 - Phase 1A Overview

A. Scope and Objectives

The objective of Stage I - Phase 1A of The Air Toxics Project for UT Austin and its subcontractors is to develop, apply, and make publicly available, neighborhood-scale air quality modeling tools for toxic air pollutants in the Corpus Christi area. Stage 1 – Phase 1A of the Air Toxics Project will provide significant and discernible environmental benefits to the Corpus Christi area by providing analyses of air pollutant concentrations experienced by the community, and providing post-event evaluation of pollutants emitted during releases. UT Austin is performing this work in collaboration with subcontractors at Texas A&M University and ENVIRON International Corporation.

B. Major Tasks

The major tasks for Stage I, Phase IA include:

1. *Development of a conceptual model of meteorological conditions likely to lead to high concentrations of air toxics in the Corpus Christi area.*

This task will identify meteorological conditions (seasons, temperatures, wind speeds, wind directions, frontal passages and other parameters) and air quality conditions that are most likely to lead to high concentrations of air toxics in populated regions of Corpus Christi. The conceptual model will be used to identify historical periods that can be used to develop and test air toxics modeling systems for Corpus Christi.

2. *Development of emissions inventory and land cover input information.*

These data will be developed at a spatial resolution that will allow the neighborhood scale air quality models to operate with a resolution of a few hundred meters.

3. *Application of dispersion models to estimate the neighborhood-scale concentrations of air toxics in Corpus Christi.*

Dispersion models represent the current best practice for estimating air toxics concentrations in urban areas. Using emissions, land cover, and meteorological data, a dispersion model will be used to estimate concentrations of air toxics in plumes from sources identified in the emissions inventory and during historical meteorological conditions identified during the conceptual model development

4. *Development of improved meteorological models of air pollutant dispersion in the Corpus Christi area.*

A more rigorous combined plume and gridded model able to characterize the complex coastal meteorology in the region will also be developed and applied in order to address uncertainties in predicted concentrations obtained from the dispersion model. A state-of-the-science meteorological model will be used to simulate the three-dimensional weather conditions in the Corpus Christi area, with a focus on the replication of historical weather patterns identified in the conceptual model. Simulation of local circulation features will be carefully assessed, and additional analyses will customize the model for best performance in the Corpus Christi area.

5. *Development of combined gridded and plume models to estimate neighborhood-scale concentrations of air toxics in Corpus Christi:*

The combined gridded and plume model will predict three-dimensional concentrations of selected air toxic pollutants throughout the Corpus Christi area using the meteorological modeling, emission inventory and land cover data described above. An evaluation framework will be developed to compare predicted and observed concentrations during specific historical episodes and to refine the modeling approach and performance.

6. *Application of the combined dispersion and gridded modeling tools to estimate concentrations of air toxics in Corpus Christi.*

The combined dispersion and gridded modeling tools will be applied to estimate concentrations of air toxics in Corpus Christi under a variety of meteorological conditions for routine emissions and when monitoring data has indicated higher concentrations of air toxics than would be expected under routine emission conditions; spatial mappings of the estimated air toxics concentrations will be made available on a Project website.

C. Project Milestone Schedule

The meteorological and air quality modeling is on-going as described below.

D. Scheduled Project Presentations and Meetings

The Corpus Christi Air Monitoring and Surveillance Camera Project Advisory Board did not meet during this quarter. The next meeting is scheduled for November 18, 2010.

III. Air Toxics Project – Stage 1 - Phase 1B Overview

A. Scope and Objectives

The initial workplan for the Stage I funding called for application of the modeling tools to the Houston Ship Channel region after their demonstration in Corpus Christi with the goal of demonstrating that the neighborhood-scale air toxics modeling framework is applicable to other urban areas. The area surrounding the Ship Channel in east Harris County, Texas was to be used for this demonstration, and the period to be modeled will be August 15-September 15, 2006, which corresponds to the period of the Second Texas Air Quality Study (TexAQS II).

The initial workplan for Stage I has been restructured and Phase 1B of the project reserves approximately 50% of Stage 1 project funds, approximately \$2.3 million, to extend the operation of the Corpus Christi ambient monitoring network. As a result the modeling of the Houston Ship Channel region will be deferred pending availability of Stage 2 funds.

B. Goals

Under Phase 1B the project team will use the air quality modeling results in synergy with the data collected from the ambient network to help develop recommendations for future changes in the geographic configuration and/or instrumentation for the network that might facilitate better characterization of the air toxics exposure patterns.

IV. Stage 1 – Phase 1A Project Progress Report

A. Meteorological Team

Dr. Nielsen-Gammon's group at Texas A&M University is presently performing statistical analysis of model performance for the September 2005 - February 2006 and September 2008 – February 2009 Weather Research and Forecast (WRF) meteorological modeling simulations at a 1-km spatial resolution. Experiments were performed to investigate the possibility of sub-1km model resolution simulations in the Corpus Christi area.

B. Modeling Team

AERMOD and CALPUFF modeling simulations with emissions for all anthropogenic sources in the 2005 TCEQ Photochemical Modeling Inventory have been completed by UT Austin. A draft final report on the results of all dispersion modeling has also been completed and is undergoing internal review. This report includes descriptions of the modeling methodology, comparisons of the dispersion modeling results to ambient observations, maps of predicted spatial distribution of

benzene and 1,3-butadiene concentrations, and discussions of key findings and recommendations for the region.

V. Collaborative Relationships and Leveraging of the Air Toxics Project

None during this reporting period.

VI. Financial Summary

A. Financial Report

Details of the following financial summary information are included in Appendix A, beginning on page 7.

1. Detailed List of the Actual Expenditures Paid from Air Toxics Project Funds through September 30, 2010
Expenditures of Air Toxics Project funds during this quarter totaled \$46,411.95. The breakdown of expenditures can be found in Appendix A, page 8. The activities for which these expenditures were used are detailed in this report.
2. Total Interest Earned on Air Toxics Project Funds through September 30, 2010
The interest earned during this quarter totaled \$20,055.86. A report providing detailed calculations of the interest earned on the Air Toxics Project funds is included in Appendix A, page 8.
3. Balance as of September 30, 2010, in the Air Toxics Project Account
The balance in the Air Toxics Project account, including interest earned totals \$3,163,971.08.
4. Anticipated Expenditures for the Funds Remaining in the Air Toxics Project Account
The anticipated expenditures for the remaining funds will total \$3,163,971.08.

Quarterly Report Distribution List:

U.S. District Court

Ms. Marianne Serpa, Assistant Deputy-In-Charge, District Court Operations
for distribution to the Honorable Janis Graham Jack

cc: The University of Texas at Austin

Mr. Lee Smith, Associate Vice President for Legal Affairs

Dr. Elena McDonald-Buller, Center for Energy & Environmental Resources

Mr. Gary McGaughey, Center for Energy and Environmental Resources

Mr. Vincent M. Torres, Center for Energy and Environmental Resources

Dr. David Sullivan, Center for Energy and Environmental Resources

Texas Commission on Environmental Quality

Ms. Sharon Blue, Litigation Division, Headquarters

Ms. Susan Clewis, Regional Director, Region 14

Mr. David Kennebeck, Air Section Manager, Region 14

Mr. Ken Rozacky, Monitoring Operations Division, Headquarters

Mr. Keith Sheedy, Chief Engineer's Office, Headquarters

Ms. Rosario Torres, Air Section Work Leader, Region 14

Members of the Advisory Board of the *Corpus Christi Air Monitoring and
Surveillance Camera Project*

APPENDIX A

FINANCIAL REPORT of Expenditures and Interest Earned

Neighborhood Air Toxics Modeling Project for Houston and Corpus Christi - Stage 1 Phase 1A

Accounting Report for the Quarter

07/01/2010 - 09/30/2010

A. Total Amount of Air Toxics Funds and Other Funds Received Under This Proposal

Total Grant Amount:	\$4,608,452.90
Total Interest Earned:	\$270,785.21
Total Funds Received:	\$4,879,238.11

B. Summary of Expenditures Paid by Air Toxics Funds

		Yr 1 and Yr2 Budget	Year 3 Budget	Adjustments this Quarter	Adjusted Budget	Prior Activity	Current Activity 07/01/10 - 09/30/10	Encumbrances	Remaining Balance 9/30/2010
Salaries-Prof	12	\$616,882.00	\$228,508.00	\$0.00	\$845,390.00	(\$719,052.27)	(\$13,567.66)	\$0.00	\$112,770.07
